                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local Similarity 90.0 Matches 9; Conservative
                                                                                                                variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                           AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL

                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                       through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Complementarity determining region 3 (CDR3) of VL chain of clone G81.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAG62984 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific bunding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200144300-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibody: light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzhelmer's disease; prion disease; AIDS-related dementia; epilepsy; brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01-OCT-2001

                                                                                                                                                                           pCR was used to prepare a human scFV library from RNA from white blood cells from an unimmunised donor. Heavy chains from IgG and IgM antibodies were amplified separately. Four separate libraries were generated (IgG-K, IgG-lambda, IgM-K and IgM-Lambda). The purified scFv fragments were ligated into the phagemid pHEN1 for purified scFv fragments were ligated into the phagemid pHEN1 for the captions were then subjected to affinity selection for binding to phox:BSA by selection on tubes followed by analysis by ELLSA. Of Genes analysed, 43 showed binding to both phox:BSA and BSA. There were designated BSA binders. Thirteen of fourteen clones sequenced had the same sequence, the VH derived from a human VH3 family gene (AAR22571) and the VL from a human V lambda 1 family gene and a human VH family gene and a human VH family gene and a human VH family gene (Coxazolone binder). This sequence revealed a VH derived from a human VH family gene (AAR22570).

Coxazolone binder). This sequence revealed a VH derived from a family gene (AAR22570).

                                                                                                                                                                                                                                                                                                                                                                           binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AlDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC different specific binding members, each comprising an antibody VH
CC and/or VL variable domain and capable, when displayed on the surface
CC of filamentous bacteriophage particles or in the case of a specific
CC binding member comprising the D5 VH and/or VL variable domain when
CC bond to human serum amyloid protein, to pass through a mammalian
CC blood brain barrier (BBB). The panel is useful for the selection of
CC specific binding members with a desired property such as ability to
CC cross BBB, ability to bind endothelial cells or other brain cell antigen,
CC ability to bind intracellular adhesion molecules and to bind transferrin
CC ability to bind intracellular adhesion molecules and to bind transferrin
CC receptor. The antibodies are useful in diagnosis, prophylaxis and
CC treatment of human or animal body, including neurological diseases, such
CC as Allzhamer's disease, prion disease, AIDS-related dementia, epilepsy
CC and traumatic brain injury and any diseases involving inflammation
CC occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                 tches
                                                                                                                                                                                                                                                                                                                                                                           variable region. This is useful for targeting the necrotic centres of malignant tumours by binding to human histone H1 and other intracellular antigens. The specific binding members based on the CDRs (complementarity determining regions) of NHS76 can be used in diagnosis and treatment of tumours like cervical, ovarian, prostate, lung, liver, pancreatic, colon and stomach tumours. The antibody is labelled with functional labels such as toxins and enzymes which are capable of converting prodrugs into active drugs at the site of a tumour.
                                                                Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when

The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such

                                                                                                                                           The present sequence represents an antibody variable light chain (VL) CC fragment. The fragment is used to produce a mixture or panel of 5 CC different specific binding members, each comprising an antibody VH CC and/or VL variable domain and capable, when displayed on the surface CC of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when CC binding member comprising the D5 VH and/or VL variable domain when CC blood brain barrier (BBB). The panel is useful for the selection of CC specific binding members with a desired property such as ability to CC cross BBB, ability to bind endothelial cells or other brain cell antigen, CC ability to bind intracellular adhesion molecules and to bind transferrin CC ability to bind areas of inflammation in the brain or BBB breakdown or CC ability to bind areas esseful in diagnosis, prophylaxis and CC treatment of human or animal body, including neurological disease, such CC as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy CC and traumatic brain injury and any diseases involving inflammation CC occurring within the brain or central nervous system.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

Title:
Perfect score:
Sequence: US-09-780-035-14 55 1 GSRDSSGIHVV 11

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 105224 seqs, 38719550 residues

number of hits satisfying chosen parameters: 105224

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                Score

The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human II-18 activity in, and treat a disorder where II-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (a.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, and stroke), heart fallure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-II-18
                                                                                                                                                                                                                                         Novel antibodies and compounds capable of binding to human interleukin-18 useful for treating, e.g., inflammatory disorders, neurological disorders, heart failure, myocardial infarction, and

These can be used in the treatment of cancer and inflammatory and immune system diseases, including systemic lupus erythematorsus, scleroderma, inflammatory myositis, Sjogren's syndrome, mixed connective tissue disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, acute respiratory distress syndrome, pulmonary inflammation, osteoporosis, delayed type hypersensitivity, asthma, primary billary cirrhosis and idiopathic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAW95252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                          comprising at least one individual nascent protein or peptide or other DNA expression product associated with one or more ribosomes and the specific mRNA encoding the protein or peptide; (b) contacting the complexed particles with a ligand, antigen, antibody or other agent in order to select particles through binding to the protein or peptide product; and (c) recovering the genetic information encoding the protein or peptide as DNA by RT-PCR carried out on the mRNA while the latter remains bound to the complexed particle. The steps of display, selection and recovery can be repeated in consecutive cycles. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28-FEB-1998;
28-MAY-1997;
26-NOV-1997;
                                                                                                                                                                                   The invention relates to methods for the display and selection of proteins or peptides and for recovery of the genetic material encoding them. One method comprises (a) transcription and translation of DNA in cell free system such that complexed particles are formed, each
mRNA complexes (ARMs). Methods in which the DNA is produced
               exemplified using single-chain antibody constructs as antibody-ribosome
                                                                                                                                                                                                                                                                        Example 13; Fig 19; 62pp; English.
                                                                                                                                                                                                                                                                                                          complexes and RT-PCR on RNA bound to ribosomes
                                                                                                                                                                                                                                                                                                                                                                             WPI; 1999-059832/05.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-IL-18 antibody 2E1 heavy

The methods can be used for the display and selection of single chain antibody fragments from libraries, antibody engineering, selection of human antibodies and selection of proteins from mRNA libraries. They can also be used to select ligands for combining sites or receptors, such ligands having potential uses as drugs or therapies. By carrying out the RPT-PCR recovery stop directly on the intact ribosome complex without prior dissociation to release the mRNA maximal efficiency and sensitivity can be obtained. Peptides AAW95247 to AAW95271 represent sequences of human anti-progesterone and anti-testosterone antibodies isolated from an immunised transgenic mouse by ARM display.
                This invention describes novel antibodies (Ab) in which the variable region (VR) of at least one chain and/or the VR of at least one heavy chain includes at least one of 7 specified sequences, or fragments of these sequences or contain at least one light chain and/or heavy chain encoded by specific nucleic acid sequences (1) and (II), reproduced, or their fragments. The products of the invention have antitumor and immunomodulatory activity. Ab, or other antibodies that recognize the same antigen, are used: (1) to identify cognate antigens; (ii) for specific labeling of plasma cells (PC), for identification or separation, e.g. in an extracorporeal system; (iii) for generating additional antibodies able to label PC; and (iv) for treating autoimmune diseases and/or tumors, e.g. multiple myeloma, lymphoma and/or tumors, e.g. multiple myeloma, lymphoma and/or tumors, e.g. multiple myeloma, lymphoma and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibody; Wue-1; variable region; light chain; heavy chain; antitumor; immunomodulatory; cognate antigen identification; autoimmune disease; tumor; multiple myeloma; lymphoma; plastocytoma; CDR-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Murine derived antibody Wue-1 heavy chain variable region CDR-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-SEP-2001 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  precursor stages, even though these precursors are used as immunogens. As therapeutic agents, they should show fewer side effects than conventional chemotherapeutic agents. This sequence represents the Wue-1 antibody variable region heavy chain complementarity determining region CDR-1 fragment described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               autoimmune disease; multiple scierosis; rheumatoid arthritis; type I diabetes; insulin dependent diabetes; IDDM; psoriasis; inflammatory bowel disease; complementarity determining region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rat; antibody 2C10; antiarthritic; immunosuppressive; n
antiinflammatory; antipsoriatic; interleukin-18; IL-18;
                                                                                                                   The present sequence is complementarity determining region I (CDR I) of the rat antibody 2010 heavy chain variable region. The antibody has high affinity for human interleukin-18 (IL-18) and is useful for treating and diagnosing IL-18-mediated disorders, e.g. autoimmune diseases such as multiple sclerosis, rheumatoid arthritis, type I or insulin dependent multiple sclerosis, rheumatoid arthritis, type I or insulin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Rat antibody 2C10 heavy chain variable region CDR I.

                                                                                                                                                                                                                 An antigen binding structure is based on the CDRs (given in AAR76078-84) of the heavy and light chains of MAB 55.1 (ECACC 93081901), which recognises the colorectal tumor-associated antigen CA55.1. It is optionally humanized and in the form F(ab')2, F(ab)', Fab, Fv, scFv or V-min, and is produced in transgenic animals or plants.
                                                                                                                                                                                                                                                                                                              Antigen binding structures containing CDRs recognising the CA55.1 antigen - produced by hybridomas and host cells, for use in the diagnosis and therapy of cancer

                                                                                                     Bacteriophage peptide library; peptide epitope; therapeutic target; variegated compound library; interleukin-8; IL-8.
                                                                                                                                                                                                                                                                                                                                                                                                                                               The present complementarity determining region 1 (CDR1), which is from a murine, anti-human high affinity immunoglobulin E (IgE) receptor, monoclonal antibody (MAb) light chain variable region, can be used in the preparation of humanised or semi-chimeric anti-human high affinity IgE receptor MAb. The MAb can be used to treat or prevent diseases, specifically allergies, associated with the receptor. The humanised, semi-chimeric or chimeric MAb have very low antigenicity in humans.

This novel method identifies compounds which interact with cc a target molecule, and comprises contacting a screening molecule with cc a variegated compound library, where the screening molecule comprises solid target molecule, or the enantiomer if the target molecule is compounds which have a desired interaction with the target molecule is tested. Ligands for a target protein can be compounded in the target molecule is tested. Ligands for a target protein can be compounded in the target protein can be compounded in the compound in the protein can be compounded in the compound in the protein can be compounded in the compound in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the rat antibody 14B7 heavy chain variable region. The antibody has high affinity for human interleukin-18 (IL-18) and is useful for treating and diagnosing IL-18-mediated disorders, e.g. autoimmune diseases such as multiple sclerosis, rheumatoid arthritis, type I or insulin dependent diabetes, inflammatory bowel disease and psoriasis. Specific changes can be introduced into the nucleotide sequences encoding the CDRs or framework regions of the variable light chain and heavy chain peptides. The resulting modified or fusion nucleic acid sequences can then be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel anti-human interleukin (IL)-18 rodent neutralizing monoclonal antibody having high affinity and useful for treating IL-18 mediated disorders such as multiple sclerosis, rheumatoid arthritis and psoriasis .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB; AAA99655

                       The present invention describes chimeric antibody (Ab) heavy (H) chains containing the variable region of the H chain of a mouse monoclonal Ab recognising human tissue factor (hTF) and the constant region of the H chain of a human ab. The variable region is one of six specified sequences (which are the H chain variable regions from mouse monoclonal Ab's ATR-2,3,4,5,7 or 8). Also described are chimeric Ab light (L)
   chains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human Ig light chain. The mutagenic primers have sequences at their 3' and 5' ends both capable of binding different framework regions linked by a sequence 6 to 50 nucleotides long. Different immunoglobulins produced using the primers may be used to produce antibody libraries having diverse and novel immunospecificities and affinities. By using mutagenic ONs an extremely large population of different randomised binding sites can be created and use of the universal light chain increases the number of combinations which yield functional
                                                                                                                                                                                                                                                                                                                    Humanised antibody recognizing human tissue factor, used for treatment of disseminated intravascular coagulation
                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 1999-620204/53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human tissue factor; TF; humanised; antibody; mouse monoclonal antibody; ATR-2; ATR-3; ATR-4; ATR-5; ATR-7; ATR-8; thrombotic disease; DIC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Humanised ATR-5 H chain V region CDR1.

The chimeric Ab's can be used for the treatment and prevention of thrombotic disease, especially of disseminated intravascular coagulation (DTC). The humanised antibody has the high hiff binding activity of the mouse monoclonal antibody but greatly reduced immunogenicity. AAZ33001 to AAZ33091 and Y527007 to AAY52767 represent sequences used in the exemplification of the present

The present sequence represents a complementarity determining region (CDR) 1 from the heavy chain of an murine antibody with having a binding specificity to B7-1 molecules. The sequence is used to construct humanized immunoglobulins, which comprise an antigen binding region of non-human origin and a portion of a human immunoglobulin. The humanized

mmunoglobulins are useful for treating autoimmune diseases,

                                          acids having a total mass that corresponds to the molecular mass of the unknown peptide; and (c) identifying a peptide in the library with a theoretical fragmentation spectrum that most closely matches the fragmentation spectrum of the unknown peptide. The method is useful in DNA cloning, anti-body production, identification of recombinant products, and the study of post-translational modifications. It allows the sequence of unknown peptides or proteins with no sub-sequence identity, to be characterised using mass spectrometry. Sequences 1 AAW87101 to AAW87364 represent a library of linear peptides constructed to exemplify the method. The isoleucine residue in these peptides can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               mellitus, insulitis, asthma, arthritis, inflammatory bowel disease, inflammatory dermatitis, and multiple sclerosis. The immunoglobulins are also useful for treating a transplant recipient or preventing transplant rejection in a transplant recipient, and treating prolliferative disease (leukemia, lymphoma and cancer), anaemia (sickle-cell anaemia, thalassemia and aplastic anaemia), inborn errors of metabolism, congenital immunodeficiency diseases, and myeloid dysplasia syndrome.

Best Local Similarity
                             the sequence of unknown peptides or proteins with no sub-sequence identity, to be characterised using mass spectrometry. Sequences AAW87101 to AAW87364 represent a library of linear peptides constructed to exemplify the method. The isoleucine residue in these peptides can be replaced by leucine to construct another 264 linear peptides to be included in the library.
                                                                                                                        unknown peptide; and (c) identifying a peptide in the library with a theoretical fragmentation spectrum that most closely matches the fragmentation spectrum of the unknown peptide. The method is useful in DNA cloning, anti-body production, identification of recombinant products, and the study of post-translational modifications. It allows
                                                                                                                                                                                                        sequence of an unknown peptide. The method comprises (a) determining the molecular mass and an experimental fragmentation spectrum for the peptide; (b) comparing the experimental fragmentation spectrum of the unknown peptide with a theoretical fragmentation spectra calculated for a peptide library composed of all possible linear sequences of amino acids having a total mass that corresponds to the molecular mass of the

                                                                                                                                                                                                                                                                      The present peptide, when labelled with a fluorescent dye, can be used as an isoelectric point (pI) marker for isoelectric focusing with fluorescence. The dye is linked to the peptide's amino-terminal through an amide, thioamide, sulphonamide, urea, thiourea or urethane bond, and is rhodamine, fluorescein, cyanine, indocyanine, indocyanine, pyronine, lucifer yellow, quinacrine, squarilium, coumarin, fluoroanthranil maleimide or anthracene. The marker can be used for capillary isoelectric focusing, and it is possible to construct peptide sets that cover a wide pI range and have good storage stability.

The present peptide has a calculated pI value of 7.90.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19-OCT-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The peptides represented in AAR13803-12 are examples of a generic formula. They are substrates for assaying factor Xa (an enzyme involved in haemostasis). Compared with known substrates they have better affinity, selectivity and/or water solubility.
                                                                                                                                                                                                                                                                                             (UYRO-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
```

This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especial cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer'

Disclosure; Figure 8; 258pp; English.

disease, Down's syndrome, myotonic dystrophy, Huntington's disemultiple sclerosis, alcoholic liver disease, diabetes mellitus and many others listed) or susceptibility to these disorders. T

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allows a definitive diagnosis of Alzheimer's disease in living patients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including beta-amyloid precursor protein (beta-APP), the microtubule associated proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule associated protein 2 (MAP2), neurofilament-L, neurofilament-M, neurofilament-F, presenilin I, presenilin II, glial fibrillary acidic protein (GFAP), the cellular tumour antigen p53, B-cell leukemia/lymphoma 2 (bcl-2) proto-oncogene, semaphorin III, HUPF-1, high mobility group protein-C (HMGP-C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                            30-NOV-1990;
01-FEB-1990;
                                                                                                                                                                                                                                                      \ensuremath{\mathsf{DNA}} encoding human epididymis polypeptides - useful for, e.g. diagnosis of male infertility
                                                                                                                  This sequence represents a novel human epididymis-specific protein, HE4 epitope fragment. This protein may be used for cloning and for expression of human epididymis-specific polypeptides in prokaryotic or eukaryotic host cells. Such proteins and antibodies generated from them may be used for diagnosis of e.g. male infertility. The polypeptides and antibodies may also be used for treatment of male infertility and for
                                                                                                                                                                                                                                                                                                    WPI; 1998-585748/50.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a fragment of a tumour necrosis factor inhibitor of the invention. The inhibitors are antagonists of tumour necrosis factor-alpha (TMF-alpha), comprising less than 15 amino acids, having restricted conformation and capable of binding to TMF p55 and/or TMF p75 receptor. The inhibitors are useful for treating a disease or condition mediated by TMF-alpha such as sepsis syndrome, cachexia, circulatory collapse and shock resulting from acute or chronic bacterial infection; acute and chronic parasitic or infectious processes, including bacterial, viral and fungal infections; acute and chronic immune and autoimmune disorder, such as systemic lupus erythematosus and rheumatoid arthritis, alcohol-induced hepatitis; chronic inflammatory disorder such as sarcoidosis and Crohn's disease; vascular inflammatory disorder such as disseminated intravascular coagulation, graft-versus-host disease, Rawasaki's disease, and malignant disorders involving TMF-alpha-secreting
             Anti-inflammatory; macrophage inhibitory activity; fibronectin; T-cell inhibitory activity; adherence; extracellular matrix; up-regulation; fas receptor expression; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inflammation. The peptides also inhibit the ability or macrophages and T-cells to adhere to extracellular matrix components and fibronectin, well as up-regulated fas receptor expression in T-cells. They can be used to inhibit unwanted immune reaction and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    agents. The peptides can be covalently linked to one another either directly or through a spacer. The peptides and their derivatives have macrophage inhibitory and T-cell inhibitory activity and thus, anti-inflammatory activity. The peptides and compositions have anti-immune activity, i.e. inhibitory effects against a cellular and humoral immune response, including a response not associated with inflammation. The peptides also inhibit the ability of macrophages and

CC presentlin-1-1 protein (see AAW05733 for wild type sequence). AAW05734 CC presents a different wild type form of presentlin-1 that results from the presents a different wild type form of presentlin-1 that results from the presents a different wild type form of presentlin-1 that results from the presents of the genomic DNA sequence. The presentlins are a family of highly conserved integral membrane proteins with a common structural motif, common alternate splicing patterns, and common the present of the present of the present of the present of the common and the patterns of the genes are implicated in the multiple sequences of the genes are implicated in the common sequences of the proteins of the proteins, or vectors that the proteins of the wild type sequences can be used for these mutant forms of the proteins and modulators of PS gene expression the contentially useful for treatment of AD etc. Transgenic animals are useful as models for drug screening. The antibodies can also be used e.g. the protein of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The peptides of the invention may be used to treat acute pancreatitis, chronic obstructive pulmonary disease (pulmonary emphysema) and certain forms of arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tri:peptide and tetra:peptide elastase inhibitors - used to treat acute pancreatitis, chronic obstructive pulmonary disease e.g. emphysema and some forms of arthritis
                                                                                            The sequences given in AAR23931 - AAR23938 are synthetic peptides which were introduced into human lactoferrin (LF) by introducing the DNA encoding the peptide into the human LF gene and then incubating the mixture. The introduction of the peptide caused increased transformation rates compared to unmodified LF and this method could be used to introduce an exogenous gene into an animal cell with no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 9;

                                This peptide is an active carboxy-terminal fragment derived from beta-endorphin. The peptide or an active analogue can be used in the manufacture of a medicament for the treatment of diabetes mellitus, by increasing uptake of blood glucose in muscle. The peptide does not include the opioid amino-terminal region of beta-endorphin, and enhances
Sequence
                                                                                                       Claim 8; Page 11; 18pp; English.
                     uptake of glucose into muscle by a non-insulin dependent route.
                                                                                                                                 blood glucose in muscle

                                                                                                                                                                                                                                                                                         This peptide is an active carboxy-terminal fragment derived from beta-endorphin. The peptide or an active analogue can be used in the manufacture of a medicament for the treatment of diabetes mellitus, by increasing uptake of blood glucose in muscle. The peptide does not include the opioid amino-terminal region of beta-endorphin, and enhances
                                                                                                             7457
Beta-endorphin; diabetes mellitus; glucose uptake; insulin; muscle.
                                                                                                                                                                                                                                                                                                                                                                                                Use of peptide including active carboxy-terminal fragment of beta-endorphin - to treat diabetes mellitus or increase uptake
                          Beta-endorphin C-terminal fragment 3.

                                                                                                                                        This peptide is an active carboxy-terminal fragment derived from beta-endorphin. The peptide or an active analogue can be used in the manufacture of a medicament for the treatment of diabetes mellitus, by increasing uptake of blood glucose in muscle. Although a known peptide, this modified form is more stable and can be administered orally, as compaared to the unmodified form which is given intravenously, subcutaneously or intramuscularly. The peptide does not include the opioid amino-terminal region of beta-endorphin, and enhance uptake of glucose into muscle by a non-insulin dependent route.
                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                           Score

They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet epris alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed. Fragments of the scFV VH or VL chain, including CDR

The present sequence is

that of

complementarity determining region

The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a

The HID series of scFv was isolated from a human synthetic VH and VL scFv library on the basis of their binding to platelet GPIb. Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scFv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of aniththrombotic capants useful for the

Methods of inhibiting aggregation of platelets, of binding human platelet GPID alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed. Fragments of the scFV VH or VL chain, including CDR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human II-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory agents. The present sequence represents an anti-II-18 antibody 2E1 light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease, inflammatory bowel disease, and osteoarthritis), neurological disorders (e.g., Huntington's chorea, Parkinson's disease, Alzheimer's disease, at
                             The present sequence represents a complementarity determining region (CDR) of a single chain (ScFv) antibody of the invention. The specification describes a substance can inhibit the binding between hepatitis C virus (HCV) and cells with potential HCV infection, cells with expression of CD81, or CD81. This substance is especially an antibody with affinity towards HCV EZ/NS1 protein, containing amino acid sequences based on the CDR1, CDR2 and CDR3 of the H and L chain variable regions. The antibody inhibits the viral envelope glycoprotein. It is also a CDB1 inhibitor. The antibodies and drugs are used for the tenth of the containing the contain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local Similarity
                                                                                                (TPO). They can stimulate proliferation, differentiation or growth of megakaryocytes. They may also be able to stimulate megakaryocytes to increase platelet production. They can be used for treating immunological or hematopoietic disorders, especially thrombocytopenia. Thrombocytopenia -associated bone marrow hypoplasia (e.g. aplastic anemia following chemotherapy or bone marrow transplant) may be effectively treated with the antibody compounds as well as disorders such as disseminated intravascular coagulation (DIC), immune thrombocytopenia (HIV-induced and non HIV-induced), chronic idiopathic thrombocytopenia, congenital thrombocytopenia, thrombotytopenia and so be used in e.g. myelotoxic chemotherapy for treatment of solid tumours or lowered; myelotoxic chemotherapy for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Agonist antibody; thrombopoietin receptor; TPO-R; thrombopoietin; DIC; megakaryocyte; platelet; immunological; hematopoietic; thrombocytopenia; bone marrow hypoplasia; disseminated intravascular coagulation; anemia; myelodysplasia; myelotoxic chemotherapy; leukaemia; tumour; MuSK; CDR; neuromuscular; muscular dystrophy; complementarity determining region; variable heavy chain; variable light chain; VH; VL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAY06691 standard; Protein; 7 AA
used for improving neuromuscular dystrophy. The products can also
                 treatment of solid tumours or leukaemia, myeloablative chemotherapy for autologous or allogeneic bone marrow transplant, myelodysplasia, and immune idiopathic aplastic anemia, congenital thrombocytopenia, and immune thrombocytopenia. The antibodies which bind to the MuSK receptor can be used for improving neuromuscular function in a patient, e.g. in muscular
                                                                                                                                                                                                                                                                                                          The invention relates to an agonist antibody (Ab) which binds to a thrombopoietin receptor (TPO-R). The antibodies which bind the TPO-R cibe used in the same way and for the same indications as thrombopoietin
                                                                                                                                                                                                                                                                                                                                                                                     Claim 10; Page 75; 86pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Adams CW,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25-AUG-1997;

                                                                                                                        AAW39827-29 represent the sequences of the light chain complementarity determining regions (CDRs) of the catalytic antibody 9A3, which is able to degrade cocaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 9A3 antibody was identified using TSA1, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 9A3 has a per minute Kcat of 0.015. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They

                                                                                                    determining regions (CDRs) of the catalytic antibody 1968, which is able to degrade occaine. A series of cocaine transition state analogues (TSAs) were prepared and used to immunise mice for production of hybridomas. Catalytic antibodies were identified by their capacity to release 3H-benzoic acid from 3H-phenyl cocaine. The 1968 antibody was identified using TSAI, which is an immunogenic conjugate of a phosphate monoester transition state analogue. Antibody 1968 has a per minute Kcat of 0.091. The antibodies reduce the concentration of cocaine in a subject, and are used particularly for the treatment of an overdose. They are also used for treating addiction (by reducing the in vivo

                                                                                                                                                                                                                                                                                                                                                        This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antiqen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-IL-12 CDR3 related amino acid sequences, AAB39572-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and AAB60067-C61071. The antibodies of the invention are given in AAB40068-C61071. The antibodies of the invention is a neutralising antibody and hes antibody of the invention is a neutralising
                                                                                                                                                                                                                          The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human II-12, especially Crohn's disease, multiple scherosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition

                                                                                                                                                                                                                                                                                                                                                      for diagnosis (including monitoring and determining predisposition), prevention and treatment of autoimmune thrombocytopaenic purpura (ATTF and also for modulating binding of fibrinogen to thrombocytes (particularly to dissolve thrombi and/or prevent their formation, e.g. in cases of cardiac infarction or pulmonary embolism). Unlike murine antibodies, human antibodies (abb) do not induce adverse side effects and persist for longer in vivo than small peptides. AAM90293-W90337 represent antibody fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel nucleic acid fragments that encode human auto-antibodies and anti-idiotypic antibodies against blood platelet membrane protein, GPIIb/IIIa. The products of the invention are used

Such an antibody is referred to as a mimobody. The anti-IgE antibody fragment is used as a vaccine, and as a pharmaceutical for treating IgE-mediated diseases such as allergy, in particular asthma, atopic dermatitis, rhinitis, chronic urticaria and food allergies. It is also used to treat IgE-mediated diseases. It is also used for raising polyclonal or monoclonal antibodies. The polyclonal or monoclonal antibodies obtained are useful

                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences ARB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human antibody specific for human treat disorders characterized by aberr disease and mu/ttiple sclerosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAC61062-C61071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antisclerotic; antiinflammatory; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity.
                                                                            antisclerotic; neuroprotective; antipsoriatic; a
antiparasitic; antibacterial; immunosuppressive;

                                                                                                                                                                                                                                                                                             RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences ABB39485-839516 represent human anti-IL-12 antibody heavy and light chain complementarity determining region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in ABB39517-B39560 and ABA40088-B40149. Sequences, ABB39577-B40063 represent anti-IL-12 CDR3 related amino acid sequences, ABB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are given in ABA40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AA640071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antiscleratic; antisting antition and antibody and has antirheumatic; antiarthritic; antiscleratic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiinflammatory; neuroprotective; antipsoriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition
                                                                Human; neutralising antibody; interleukin-12; IL-12; antiinflammatory; complementarity determining region; CDR; antirheumatic; antiarthritic; antisclerotic; neuroprotective; antipsoriatic; antiasthmatic; cardiant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Salfeld JG, Roguska M, Paskind M, Banerjee S

Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39517-B39771 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-CG1071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antiarthratic; antiarthratic; antiarthratic; antiarthratic; antiarthratic; antiarthratic; antiarthratic; antiparasitic; antibody and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of the antibodies or antigen-binding fragments are useful in the treatment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This invention relates to a new human antibody specific for human continued interleukin-12 (Ir-12). The invention also includes antigen binding portions that bind to II-12. Sequences AAB39485-B39516 represent human continued anti-II-12 antibody heavy and light chain complementarity determining cregion (CDR) amino acid sequences, and also includes variable region camino acid sequences. Other variable region and acid sequences are created in AB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-II-12 CDR3 related amino acid sequences AAB39772-B40063 crepresent other CDR3 related amino acid sequences, AAB39772-B40063 crepresent other CDR3 related amino acid sequences are CC given in AAB40064-B40067, Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-C61071. The antibody of the invention are given in CC cantibody and has antirheumatic; antiarthritic; antisclerotic; antibody and has antirheumatic; antibacterial and immunosuppressive activity. CC cardiant; antiparasitic; antibacterial and immunosuppressive activity. CC cardiant; antiparasitic; antibacterial and immunosuppressive activity. CC despecially Crohn's disease, multiple sclerosis and rheumatoid arthritis. CC especially Crohn's disease, multiple sclerosis and rheumatoid arthritis.

This invention relates to a new human antibody specific for human (CC) interleukin-12 (IL-12). The invention also includes antigen binding (CC) portions that bind to IL-12. Sequences AAB39485-B39516 represent human (CC) anti-IL-12 antibody heavy and light chain complementarity determining (CC) region (CDR) amino acid sequences, and also includes variable region (CDR) amino acid sequences. Other variable region amino acid sequences are (CC) given in ABB39517-B39560 and ABB40068-B40149. Sequences AAB39772-B40063 (CC) represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 (CC) represent other CDR sequences. Light chain CDR3 consensus sequences are (CC) given in AAB40064-B40067. Primers used in the identification and (CC) antibody and has antirbedies of the invention are given in (CC) antibody and has antirbematic; antiarthritic; antisclerotic; antibody and has antirbematic; antisperiatic; antisclerotic; cC antibody and has antirbematic; antisperiatic; antisclerotic; antisclerotic; antibodies or antiperiatic; antisperiatic; antisclerotic; cC antibodies or antiperiatic; antibodies or antiperiatic; antisperiatic; antisclerotic; cC antibodies or antiperiatic; antibodies are useful in the treatment (CC) foliosorders associated with detrimental release of human IT-12, and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and also be used in the manufacture of a pharmaceutical composition (CC) and the composition

Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides isolated antibodies, or antigen-binding portions that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental in, a human subject suffering from, inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,

The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind areas of inflammation molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including nervological diseases,
                                                        each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL
                                                                                                                                                             AAG62970-AAG63005 represent complementarity determining region 3 (CDR of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members,
                                                                                                                                                                                                                                                                                                                                                        Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease; prion disease; AIDS-related dementia; epilepsy; brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such as Alzheimer's disease, prion disease, AIDS related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                            Claim 1; Page 76; 109pp; English.

AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in "he brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease; prion disease; AIDS-related dementia; epilepsy; brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Page 76; 109pp; English.

                           when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease; prion disease; AIDS-related dementia; epilepsy; brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page 76; 109pp; English.

                                                                                                                                                                   when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                  AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease; prion disease; AIDS-related dementia; epilepsy; brain injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 76; 109pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT
                                                                                                                                                                                 variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                          when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL _{
m VL}
                                                                                                                                                                                                                                                                                                                                                                                                            AAG62970-AAG63005 represent complementarity determining region 3 (CDR: of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mixture or panel of antibodies for selecting specific binding member that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  endothelial cell; brain cell antigen; inflammation; adhesion molecule;

                                                                                                                                                                                                                                                                                                                                                CC of VL and VH chains of antibodies of the invention. The specification of describes a mixture or panel of 5 different specific binding members, CC each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass CC through a mammalian blood brain barrier (BBB). The panel is useful for CC the selection of specific binding members with a desired property such CC as ability to cross BBB, ability to bind endothelial cells or other brain CC cell antigen, ability to bind areas of inflammation in the brain or BBB CC breakdown or ability to bind areas of inflammation molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, All5-related dementia, CC inflammation occurring within the brain or central nervous system.

                                                                                                                                                                                                                                                                                                                                                                                                                          CC of VL and VH chains of antibodies of the invention. The specification of describes a mixture or panel of 5 different specific binding members, cc each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass ct through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such cc as ability to cross BBB, ability to bind endothelial cells or other brain cc ell antigen, ability to bind areas of inflammation in the brain or BBB creakdown or ability to bind areas of inflammation molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, cepilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of antipen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 basis of their binding to platelet GPIb. Whether displayed as surface proteins on a phagemid or secreted as free sefv by Escherichia coli, the HIB sefv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scare composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, because of platelet-dependent thrombi in diseased arteries.
                                                                                                                                                                                                            Variable light chain; single chain antibody; scFv; human; HIb-3; glycoprotein Ib alpha; platelet; aggregation; antiaggregant; antithrombotic; thrombus; therapy; diagnostic; CDR3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPID alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed. Fragments of the scFv VH or VL chain, including CDR fragments, are also claimed.

Scherichia coli, the HIB SCFV clones are capable of inhibiting
You Willebrand factor-dependent aggregation of platelets. The SCFV
are composed of native human protein sequences and are therefore
attractive potential reagents for therapeutic purposes. They
provide a new class of antithrombotic agents, useful for the
prevention of platelet-dependent thrombi in diseased arteries,
bypass grafts, dialysis etc., and can also be used as diagnostic
reagents. Methods of inhibiting aggregation of platelets, of
binding human platelet GPID alpha and of selecting a VH or VL
region of an antibody that inhibits platelet aggregation are
claimed. Fragments of the SCFV VH or VL chain, including CDR
fragments, are also claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of complementarity determining region 3 (CDR3) of the light chain variable region (VL) of human single chain antibody (scFv) HID-3 (see AAY95219), which is directed against platelet glycoprotein Ib (GPID). The HID series of scFv was isolated from a human synthetic VH and VL scFv library on the basis of their binding to platelet GPID. Whether displayed as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 grom these six proteins, gE and gB are the major immunoreactive glycoproteins. These sequences can be used for stimulating an immune response against VZV infection. These peptides can also be used for determining the presence of anti-VZV gE antibodies in a sample, and in the diagnosis of VZV infection. The antibodies against these sequences can be used for passive immunisation treatment, and in diagnostic applications. This sequence contains the major VZV gE immunodominant epitope and allows the development of products which can produce an enhanced and broader immuno records.
                                               Antibodies that bind antagonistically to osteoprotegrin binding protein, useful for treating osteoporosis, metastasis of cancer bone, rheumatoid arthritis, hypercalcaemia of malignancy and steroid-induced osteoporosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR88522-R88549 represent fragments of the Varicella-Zoster virus (VZV) gE glycoprotein. This sequence represents residues 126-135 of gE. These sequences are used to create antibodies against the VZV gE glycoprotein. gE is one of six glycoproteins encoded by the VZV genome.
                                                                                                                                                                                                                                         23-FEB-2000; 2000US-0511139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an antibody or antigen binding domain (or fragment, variant or derivative), which binds to an osteoprotegrin binding protein (OPGbp) and which is an antagonistic antibody. The antibody or antigen binding domain may be administered to inhibit osteoclast formation or activation, inhibit bone resorption in a mammal, prevent or treat loss of bone mass in a mammal and to prevent or treat cumour cell growth in bone. The loss of bone mass results from osteoporosis, metastasis of cancer to bone, rheumatoid arthritis, hypercalcaemia of malignancy and steroid-induced osteoporosis. The present sequence is an antibody light chain variable region complementarity determining region, CDR3, which can be incorporated into an antibody variage highly deaping of the invention
A new method has been developed for detecting a papilloma virus infection in an organism. The method comprises: (1) obtaining a sample of cells from the potential infection site; (i1) contacting the cells with a molecule binding specifically to papilloma virus E4 protein, and (iii) monitoring the binding. The method is useful to detect papilloma virus infections in organisms (especially mammals) and especially HPV infections (e.g. with HPV16, 18, 33, 35, 45, 51, 56, 58 or 61) in humans. Papilloma viruses cause epithelial tumours in humans varying in severity depending on the infection site and HPV type involved. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            05-SEP-1997;

```
particularly useful to determine papilloma infection in the mammalian CC cervix and especially to screen for pre-cancerous cervical lesions in CC humans, since over 90% of cervical carcinoma patients show cervical HPV CC infection. It is also useful to determine the type(s) of HPV infection in CC a patient, by using a molecule binding specifically to a subset of HPV E4 CC proteins. This is important, since progression to malignant disease (and CC proteins of the colinical prognosis) is dependent on HPV type. Molecules capable of binding E4 are also useful to target anticancer/antiviral agents capable of destroying papilloma viruses and/or papilloma virus-infected cells. CC The present sequence represents a synthetic immunoglobulin TVG 405 light CC chain CDR3 peptide, from an example of the present invention.
